

- PC-to-web connection to initiate and receive SmartMsg communications
- Web-based user registration and device management
- Internet access to SmartMsg administrative functions

WebMsg provides a web-based user registration and device-management site that enables authorized users to initiate and review SmartMsg communications from any location where web connectivity is available. The software interface supports access to the full range of SmartMsg management and administrative tools to provide comprehensive control of every aspect of system functionality--from sending and receiving alert notifications, to managing user-access rules, to establishing chat groups.

- Mobile-optimized web interface to support smartphone access
- Initiate SmartMsg functions from any location

The MobileMsg module extends the full functionality of SmartMsg to smartphones. Through a mobile-optimized web interface, MobileMsg gives users the ability to access all SmartMsg alerting, management and administrative functions from virtually any location.
